

# Roller Blinds

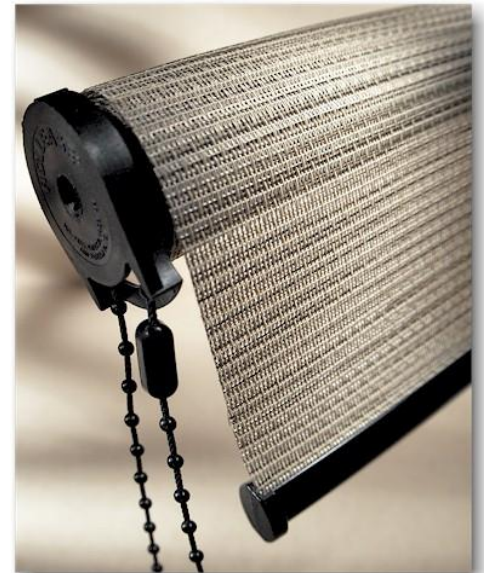

## A Blind for every window

The Protectors always kept the highest standards of quality and fashion. Over the years we have developed and introduced many new products, and today can proudly boast that we offer Roller blind to suit every window, in an unrivalled range of styles, and colors.

Every blind is carefully made to measure to your exact requirements, giving you the opportunity to bring style, color and atmosphere to every window, and indeed every room in your home. Having Roller blinds fitted to the windows in your home or office allows you to have control over how much natural light you let into a room. One can choose the option where you block out all light or you can choose the other options to let in just a little or pull the blind fully open so that room is then flooded with natural light.

**Roller blinds** – are considered as an ideal option for window dressings. For a long period of time, these blinds have been used in the home and office environment. Roller Blinds are a subtle yet elegant product, practical for just about any situation and available in a fabric to suit any interior decor and budget. Roller blinds can be motorized or controlled by a chain. Rollers blinds are one of the most functional blinds are widely used for the office room in the house. Usually, these blinds are made out of plastic material. The most remarkable feature of roller blinds is that they do not allow the morning light to come in. It is doubtless that roller blinds are elegant, simple and highly versatile

Today, Roller blinds are available in many different colors and types the following are some of the more popular types of Roller blinds available on the market.

### 1) Block-Out Roller Blinds

Ideal for bedrooms and home cinemas these fabrics block out light and reduce heat, block-out fabrics give you privacy and protect furniture and flooring from sun effects like fading and bleaching.

### 2) Sun Screen Roller Blinds:

Ideal for living areas these fabrics reduce light, offer heat reduction and glare control while maintaining the view.

### 3) Exterior Roller Blinds:

Ideal for living areas these fabrics reduce light, offer heat reduction these Roller are installed outside the home with side channel & Steel ropes

#### 4) Sheer Roller Blinds

Ideal for living areas these fabrics reduce light, reduce heat, offer privacy and protect furniture and flooring from sun effects like fading and bleaching. These fabrics are ideal when both privacy and light are wanted but no view is required.

#### 5) Printed Roller Blinds

These Rollers Blinds are ideal for Kids bedrooms, home Exterior and cinemas these fabrics block out light and reduce heat, with printing on it as per your requirement. Printed Roller Blinds give you privacy, better view and protect furniture and flooring from sun effects like fading and bleaching.

#### 6) Projector Screen Roller Blinds

# Roller Blinds Specification

## Features

- Chain control as standard
- Traditional spring mechanism available
- Maximum width up to 3310mm (depending on fabric)
- Maximum drop 3000mm
- Maximum coverage area per blind 9m<sup>2</sup>
- Minimum reveal required 60mm (space from window to front of sill)
- Child safety feature as standard
- Available in a range of fabrics and colors with color co-ordinate brackets
- Aluminium bottom rail or 6 decorator trims 43mm extruded heavy duty tube (eliminates sage & keep consistency in roll size)
- Color co-ordination (Mix & Match to suit your decor)
- Australian designed chain control (Designed to lift up to 11kg with Spring assist option)
- Many available in matching verticals, roman & panel glides
- We have the machinery to ultrasonic cut, crush cut & blade cut (Difference fabrics require specific finishing to eliminate freying)
- **Spring Loaded:** The traditional Roller Blind, uses a spring system to operate blinds. Simply hold the bottom rail and pull down. Available either with plain trim, cutout or scallop.
- **Chain Driven:** Chain driven (side winder) system allows operation of the blind using a chain from either the left or right hand side, allowing more control when operating the blind.
- **Spring Assist:** The spring assist system is attached to the chain drive mechanism and reduces the weight of lifting larger blinds.
- **Double Blinds:** Double blind system allows you to have two different fabrics within the one window. This offers you the ability to couple both a Sunscreen and block-out in the one window, affording you view, light control and total night time privacy within the one system.
- **Link System:** Ideal for large windows where coverage is beyond the size limitations of fabrics. The system allows linking and operating of up to three blinds with one control. The link system is ideal for sliding doors where three blinds are required. Linking two blinds eliminates the need for a chain drive mechanism in the middle of the window. The link system reduces the gap between fabrics from 28mm down to 20mm. The link system allows two blinds to be linked using a common centre bracket, thus reducing the gap between the fabric of both blinds, while allowing independent controls.

Double Rollers

Link System

- **Motorization:** Offers a range of automation option from hard wired switches, RTS remote control options and Cbus systems linking in with home automation systems. These systems may also be linked to timers or Sun Sensors.

Motorisation Option

- **Wire Guide:** With the wire guide system your Roller is stabilized because the bottom rail is attached to stainless steel wire as the blind rolls up and down. This means that your Roller Blind is not as affected by breeze from open windows and remains stable in any position.

Wire Guides

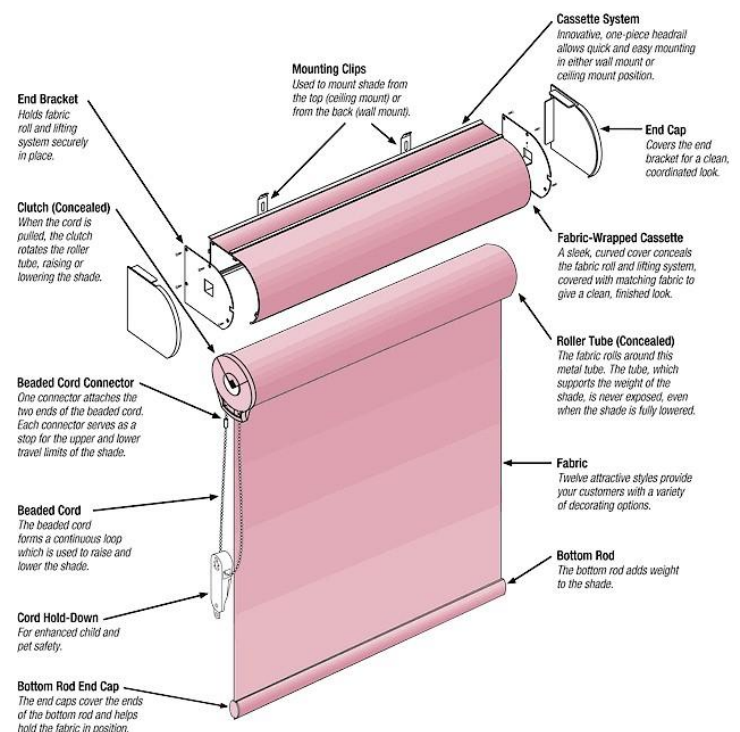

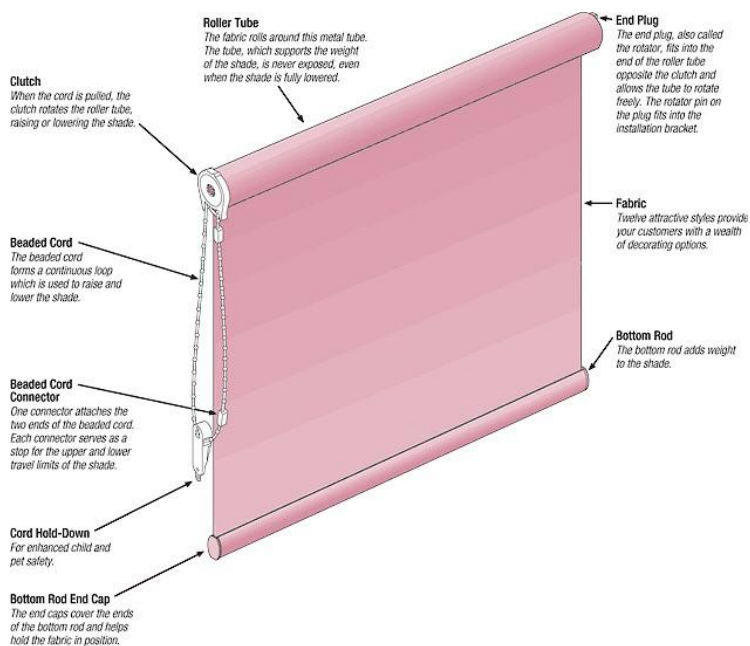

- **Cassette System:** The cassette allows the Roller Blind mechanism to be concealed within a head box. The cassette system is available in four colors.

Cassette & Side Channels

- **Cassette and Side Channels:** This system allows the Roller to be covered and the channels eliminate gaps on the sides, allowing almost total room darkening. Available in four color options.

- **FRS Valance:** Can cover multiple rollers, Matching fabric wrap available, 2 sizes: 100mm x 120mm (Projection same as width) wall thickness 18mm, 2 return styles – cap or mitered return,
